

Fig1. Important hoards of stone tools in Bohemia:

1 part of the manufacturing hoard from Vitiněves with facets of unfinished artifacts (other hoards of this type from Chudonice, Jeřice, Křinec, Lovosice)

2 Mšeno: under a floor of a Neolithic house there were functional tools of various sizes and types

3 Praha – Ruzyně: in a side of a storage pit there was probably stored a piece of material, from which people cut of pieces to make shoe-last adzes. At the same time there were axes with damaged cutting edge. Some of them seemed to be already repaired. It is difficult to differentiate them from primarily manufactured tools.
